

# Coding the Eggen Cards

Olin Eggen left us his raw photometric observations on 100,000 3x5 cards. These have been scanned into an AAVSO database. But to be useful they need to be indexed by the stars they reference. This project is calling for volunteers to help make this data available to us today. Here is what is involved:

**1. Take a guess. Is it a HD reference?**

**2. Check in Simbad**

**3. Confirm coordinates and/or alternate star reference.**

**4. Book 'em Danno! Add the star, update the card and move on to the next**

Come see the full project description at <https://sites.google.com/site/eggencards/>  
And join the fun!
