	Introdu	ction		47
	2.1			47
	2.2	How m	any transiting planets will a survey find?	54
		2.2.1	N(S) for standard candles of uniform space density	55
		2.2.2	The duration of an exoplanet transit	56
		2.2.3	The signal-to-noise ratio	57
		2.2.4	Survey volume and number of stars searched	61
		2.2.5	The number of transiting planets per star	62
		2.2.6	Scaling laws for the discovery of transiting exoplanets	64
		2.2.7	Estimating the expected planet haul	66
	2.3	Wide-f	ield astronomy	68
		2.3.1	Design considerations and hardware	68
		2.3.2	Issues arising from wide-area coverage	72
	2.4	2.4 From images to light curves		
	2.5	The Su	perWASP archive	74
	2.6	Transit	search methods	75
	2.7	Astrop	hysical mimics	79

		2.7.1	Blended eclipsing binary systems	79
		2.7.2	Grazing eclipsing binary systems	79
		2.7.3	Transits by planet-sized stars	80
	2.8	Candid	ate winnowing and planet confirmation	80
		2.8.1	Follow-up observations	80
		2.8.2	Tests performed on the survey photometry	81
		2.8.3	Spectroscopic confirmation of candidates	84
	2.9	The pre	egnant pause: overcoming systematic errors	84
Cha	pter	3 V	What the transit light curve tells us	90
	Introdu	ction		90
	3.1	Kepler	's third law and exoplanet orbits	90
		3.1.1	The semi-major axis	90
		3.1.2	The orbital speed	91
		3.1.3	The orbital inclination, the impact parameter and the transit duration	92
	3.2	The sha	ape of the transit light curve	95
		3.2.1	Limb darkening	97
		3.2.2	The eclipsed area as a function of time	103
		3.2.3	The light lost from an axially symmetric stellar disc	108
	3.3	The an	alytic underpinnings of transit light curve fitting	112
		3.3.1	The scale of the system	112
		3.3.2	The radii and consistency checks	113
		3.3.3	The orbital inclination and the mass of the planet	113
	3.4	Parame	eter determination from transit light curve fitting	113
		3.4.1	Light curve features to be matched	113
		3.4.2	The process of light curve fitting	115
Cha	pter	4 Т	he exoplanet population	122
	Introdu	ction		122
	4.1	Selection	on effects	122
		4.1.1	Direct imaging	122
		4.1.2	Astrometry	122
		4.1.3	Radial velocity	123
		4.1.4	Transits	123
		4.1.5	Microlensing	125
	4.2	The dea	mographics of the known exoplanets	125
		4.2.1	Known population as a function of discovery method	126

I

		4.2.2	The radial velocity planets	133
		4.2.3	The transiting exoplanets	138
4	4.3	The stru	ucture of giant planets	139
		4.3.1	The underlying physics	140
		4.3.2	The equation of state	142
		4.3.3	The virial theorem and the contraction and cooling of	
		D	giant planets	145
4	1.4		ters governing the size of a giant planet	150
		4.4.1	Core mass	150
		4.4.2	Total mass	152
		4.4.3	Age and irradiation	152
		4.4.4	Metallicity	153
		4.4.5	Tidal heating	155
4	4.5		uss–radius diagram	155
		4.5.1	Densities of transiting exoplanets	155
		4.5.2	Compositions of transiting exoplanets	157
		4.5.3	Surface gravities of transiting exoplanets	158
4	4.6	What ca	an we say about the Galaxy's population of planets?	159
