Wavelength (Å)

Possibilities with SkyServer:

- **have fun with scrolling sky**
- **find mags of star + field objects**
- **find what field stars are [spectra]**
- **make a finding chart**
- **compare psf mags, fiber mags and DSS, GSC to determine variability**

Available Data:

- **DR7: 8420 sq deg imaging, 230 million objects; 1656 spectral plates, 640 spectra on each plate**
- **Stripe 82: 2.5 deg on CE from 22h24m to 4h08m RA; imaged Sept-Nov in 2005-2007, some back to 2002, 5-60 measurements with median of 10 observations for each object**

Possibilities with GALEX

- **Find variables in wide field repeat obs**
- **identify their type**
- **Find UV brightness of your objects**

Star 83-1 Period:0.169 days

SDSS SkyServer things to look at:

- **Tools (Scrolling sky)**
- **Visual Tools (Finding chart, Navigate, Explore)**
- **Help (Cooking with Sloan - Stars, SQL Tutorial)**
